

Average change in IQ by aspect

So I want to see
if there is a good age
and if hs education
has an effect on
kid-score

So the kids data has

* Kid-Score: - kid IQ score

mom-age: mom age at birth

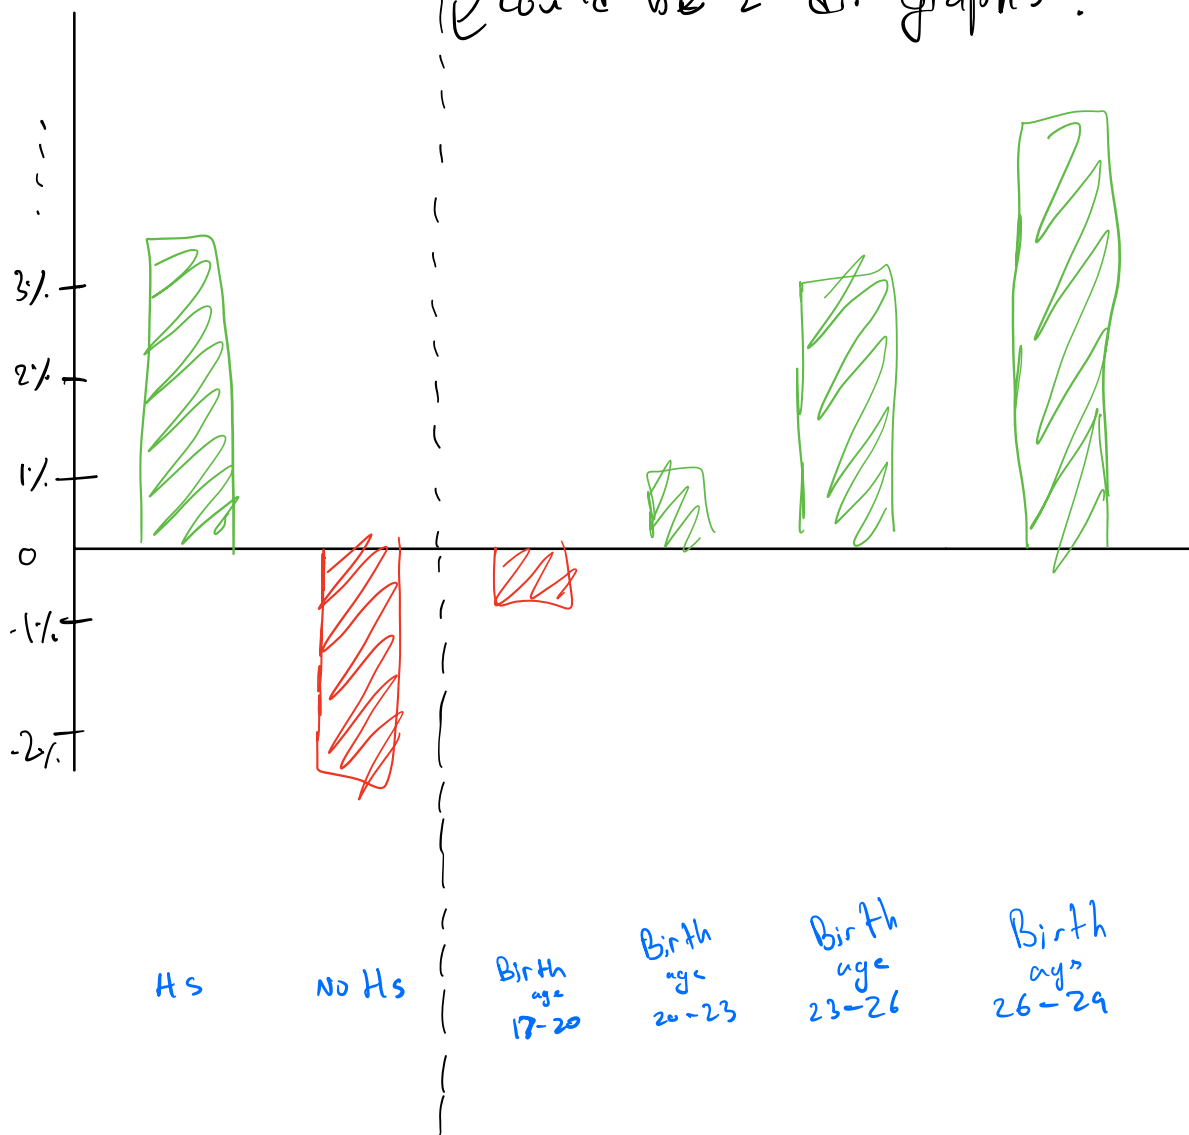

mom-hs: 0 = no, 1 = yes

* mom-IQ: mom IQ

~~mom-work: No info on this??~~

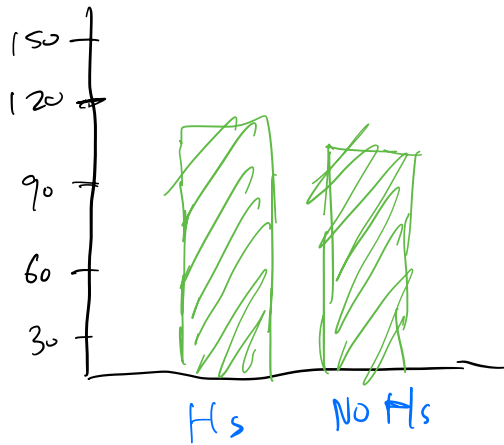

This could look like:

% change in IQ

We decided to change the y-axis to overall IQ and switch one to a line chart.

Ind. Kid IQ

Avg Kid IQ
